

LUNA'S NEW SHOES — 2024 WINNEBAGO SOLIS 59P

1. MISSION & VEHICLE

Most driving will be on the highway, including wet conditions. Gravel and forest roads matter, but are secondary. The goal is a stable, confidence-inspiring highway tire that remains comfortable and reasonably quiet while giving the van dependable traction when the pavement ends. 2024 Winnebago Solis 59P: GVWR 8,900 lb; front GAWR 4,629 lb; rear GAWR 5,291 lb; 159-inch wheelbase. Current tire size: LT225/75R16. This comparison stays with that stock size and stock wheels.

FITMENT

All five candidates are available in LT225/75R16 Load Range E configurations. Verify the actual door-jamb tire placard and stock wheel width before ordering.

2. PRIORITIES & WEIGHTING

Highway handling & stability	25%
Wet-weather performance	20%
Road noise & ride comfort	15%
Fuel economy / rolling resistance	15%
Gravel & forest roads	15%
Snow / ice	5%
Sidewall / rough-road durability	5%

Your weighting puts highway and wet-weather behavior first; off-road capability is useful insurance, not the primary mission.

3. TIRE PHOTO GALLERY — LT225/75R16

PHOTOS ARE REPRESENTATIVE

Product images are shown for visual comparison and may not reflect every sidewall marking or rim design. Tire appearance can vary by size. The photos are not fitment evidence.

4. COMPARISON — HIGHWAY-FIRST RANKING

Tire	Wet / Highway	Noise / Comfort	Fuel	Gravel / Forest	Overall fit
Falken A/T4W	Excellent	Very good	Good	Excellent	★★★★★ Best overall
General Grabber APT	Excellent	Excellent	Very good	Good–very good	★★★★½ Highway-biased
Yokohama G015	Excellent	Excellent	Very good	Good–very good	★★★★½ Road-friendly
BFG KO3	Excellent	Very good	Good	Excellent+	★★★★ Toughest
Toyo A/T III	Very good+	Very good	Good	Excellent	★★★★ Strong alternative

5. INDIVIDUAL TIRE ASSESSMENTS

Falken Wildpeak A/T4W

Leading choice. Strong balance of highway stability, wet traction, comfort/noise and off-pavement capability. Tire Rack’s LT225/75R16 information and owner feedback support strong wet/dry behavior and generally civilized road manners. Best match for the stated mission.

General Grabber APT

Best highway-biased alternative. General positions it as an on-road all-terrain tire. Owner feedback and Tire Rack survey data point to good wet/dry traction, ride quality and low noise. It gives up some aggressive off-road ability in exchange for road manners.

Yokohama Geolandar A/T G015

Road-friendly A/T. A particularly good candidate if quietness, comfort and wet-weather behavior outweigh maximum rough-road toughness. It remains capable on gravel and light forest roads and is 3PMSF rated.

6. OTHER OPTIONS + REAL-WORLD CONSIDERATIONS

BFGoodrich All-Terrain T/A KO3

The rugged choice. Excellent for mud, rocks, snow and rough roads, with strong wet-traction feedback. For this van, however, it is more off-road-oriented than your primary mission requires and can bring more weight/noise.

Toyo Open Country A/T III

Strong compromise. Toyo emphasizes responsive on-road handling, wet performance, durability and quiet operation. A credible alternative, though the A/T4W currently has the clearest fit for your highway-first priorities.

Noise & fuel economy

Any A/T can add rolling resistance and weight compared with a highway tire. Owner reports on the A/T4W range from little noticeable change to some MPG loss. There is no reliable Solis-specific MPG penalty to promise. Staying LT225/75R16 avoids adding another variable.

7. BUYING CHECKLIST

Stay with LT225/75R16. Confirm load/speed designation, door-jamb inflation requirements, stock wheel width, actual axle weights, and installed price before purchase. A/T tires can be heavier than highway tires, so compare the complete installed package rather than tire price alone.

8. BOTTOM LINE

1) Falken A/T4W — best overall match 2) General Grabber APT — best highway-biased alternative 3) Yokohama G015 — road-friendly alternative
